Vaje/Tutorial:

slovenski/Slovenian

Pogoji za vključitev v delo oz. za opravljanje študijskih obveznosti:

Prerequisites:

- Pogoj za vključitev v delo je vpis v 1. letnik študija.
- Študent mora pred izpitom opraviti obveznosti pri laboratorijskih vajah.

- The prerequisite for participation is enrolment in the first year of study.
- Students have to successfully meet all the requirements laboratory work before the examination.

Vsebina:

Content (Syllabus outline):

- *Digitalna logika in digitalni sistemi.*
- *Strojna predstavitev podatkov.*
- *Strojni nivo organizacije računalnika.*
- *Organizacija in arhitektura pomnilnega sistema.*
- *Vmesniki in komunikacija.*
- *Funkcijska organizacija.*
- *Sistemska in aplikativna programska oprema.*
- *Multiprocesiranje in porazdeljeni sistemi.*

- *Digital logic and digital systems.*
- *Hardware presentation of data.*
- *The hardware level of the organisation of a computer.*
- *The organisation and architecture of the memory system.*
- *Interfaces and communication.*
- *The functional organisation.*
- *The systemic and applicative software.*
- *Multiprocessing and distributed systems.*

Kverh, B. (2009). Uvod v računalništvo. Ljubljana: Pedagoška fakulteta.

Cilji in kompetence:

Učna enota prispeva predvsem k razvoju naslednjih splošnih in specifičnih kompetenc:

- usposabljanje za raziskovanje na področju informatike v upravljanju in poslovanju ter razvoj kritične in samokritične presoje;
- fleksibilna uporaba znanja v praksi;
- sposobnost za reševanje konkretnih delovnih problemov na področju upravljanja in poslovanja;
- sposobnost uporabe informacijsko-komunikacijske tehnologije in sistemov na področju upravljanja in poslovanja;
- spoznavanje osnovnih in specializiranih pojmov s področja računalništva in informatike;
- sposobnost povezovanja sodobnih problemov upravljanja in poslovanja z elementi IT;
- razumevanje sodobnih metod komuniciranja ob upoštevanju novih tehnoloških dognanj;
- pridobivanje znanja za razumevanje informatizacije upravljanja in poslovanja.

Objectives and competences:

The learning unit mainly contributes to the development of the following general and specific competences:

- the ability to carry out research in the field of informatics and business and the development of critical and self-critical assessment;
- flexible use of knowledge in practice;
- the ability to solve concrete work problems in the field of business and management;
- the ability to use information and communication technology and systems in the field of business and management;
- learning the basic and specific terms in the field of computing and informatics;
- the ability to link modern problems in management and business with the elements of IT;
- understanding modern methods of communication by considering the new technological findings;
- gaining knowledge in order to understand the informatisation of business and management.

Predvideni študijski rezultati:

Znanje in razumevanje:

Študent/Študentka:

- spozna osnove računalniške (Booleve) logike;
- usvoji osnovno znanje s področja snovanja in implementacije logike;
- pridobi vpogled v organizacijo in arhitekturo računalnika;
- spozna pomnilniške lastnosti in organizacijo;
- razume računalniško komuniciranje in delovanje perifernih naprav;
- usvoji znanje s področja funkcijske organizacije;
- razume delovanje systemske in aplikativne programske opreme;

Intended learning outcomes:

Knowledge and understanding:

Students:

- learn the basics of computer (Boolean) logic;
- gain the basic knowledge in creating and implementing the logic;
- gain an insight into the organisation and architecture of a computer;
- learn about the memory characteristics and its organisation;
- understand computer communication and the functioning of peripheral devices;
- gain knowledge in the field of functional organisation;
- understand the functioning of the systemic and applicative software;

<ul style="list-style-type: none"> • dobi vpogled v nove arhitekture za paralelno in/ali porazdeljeno procesiranje in programiranje. 	<ul style="list-style-type: none"> • gain an insight into new architectures for the parallel and/or distributed processing and programming.
---	--

Metode poučevanja in učenja:

- *predavanja* z aktivno udeležbo študentov (razlaga, diskusija, vprašanja, primeri, reševanje problemov, obisk računskega centra);
- *seminarske vaje* za utrjevanje znanja, reševanje konkretnih aplikacij, demonstracija uporabe IT v problemih upravljanja in poslovanja, spoznavanje rač. sistemov in perifernih naprav;
- *laboratorijske vaje* za soočanje z računalniško tehnologijo, sistemi in napravami ter uvajanje v delo z računalniki;
- *individualne in skupinske konzultacije* (diskusija, dodatna razlaga, obravnava specifičnih vprašanj);
- *priprava na individualno in skupinsko reševanje* logičnih in programskih projektov.

Learning and teaching methods:

- *lectures* with active participation of students (explanation, discussion, questions, examples, problem solving, visit to a computing centre);
- *tutorial* for recycling gained knowledge, solving concrete applications, demonstrating the use of IT for problems related to business and management, learning about computer systems and peripheral devices;
- *laboratory work* for closely examining computer technology, systems and devices and as the introduction to the work with computers;
- *individual and group consultations* (discussion, additional explanation, dealing with specific issues);
- *preparation for individual and group solving* of logical and program projects.

Načini ocenjevanja:

Delež (v %)

Weight (in %)

Assessment:

Način (pisni izpit, ustno spraševanje, naloge, projekt):		Types (written examination, oral examination, coursework, project):
<ul style="list-style-type: none"> • pisni (ustni) izpit • seminarska naloga s predstavitevijo in zagovorom 	60 40	<ul style="list-style-type: none"> • written (oral) exam • seminar presentation and defence
